

SUDHANSHU SHEKHAR

Senior QA Automation Engineer | Playwright (JavaScript) | API Testing | CI/CD | Retail POS & ERP

+91-7004237899 | sudhanshushekhhar496@gmail.com | linkedin.com/in/sudhanshu-shekhhar-sud | github.com/sudhansushekhhar

PROFESSIONAL SUMMARY

QA Automation Engineer with 5+ years testing retail POS and ERP systems, currently migrating POS automation from Katalon to Playwright (JavaScript) at iVend Retail. Builds frameworks that verify what the server actually booked, not just what the screen shows, and runs them in GitHub Actions. Cut suite runtime by about 30% by moving test setup from the UI to the API.

TECHNICAL SKILLS

Automation: Playwright (JavaScript), Selenium WebDriver (Java), TestNG, Katalon Studio, testRigor

Framework design: Page Object Model, Playwright fixtures, API-based test data setup, custom ESLint rules for test code

API testing: REST APIs, Postman, RestAssured, session and cookie-based authentication

CI/CD: GitHub Actions, Jenkins, Docker, Git/GitHub | **Data:** SQL, MySQL, backend data validation | **Performance:** Apache JMeter (basic)

AI in testing: Claude Code agents with lint and review guardrails, testRigor (AI-based)

Test management: Jira, TestRail | **Languages:** JavaScript, Java

Methods: Agile/Scrum; test strategy and test planning; functional, regression, smoke, integration and cross-browser testing

PROFESSIONAL EXPERIENCE

Senior Test Engineer | iVend Retail Pvt. Ltd.

Jul 2025 - Present

- Migrated 400+ POS and ERP regression scenarios from Katalon to Playwright (JavaScript), keeping both suites running during the move.
- Built reusable components for login, POS actions, API calls, test data and logging, shared across the whole suite.
- Set up GitHub Actions runs with selectable suites, environments and browsers; the full regression suite completes in 50 minutes.
- Diagnosed CI-only failures (cookie/session handling, Docker environment config, browser-specific timing) and fixed the root causes, making the regression suite stable enough to trust for release sign-off.
- Replaced UI-driven test setup with API calls for login (shared session state) and test data creation, cutting suite runtime by about 30%.
- Analysed regression results for each release and promotion, and reported go/no-go risks to the team.

Senior QA Engineer | TestingXperts Pvt. Ltd.

Oct 2021 - Jun 2025

- Wrote test strategies, test plans and test cases for retail POS, telecom, HR scheduling and ERP products across 3 clients, and executed them manually and through automation.
- Built and maintained Selenium (Java, TestNG), Katalon and testRigor suites totalling about 1,200 tests.
- Shortened regression cycles by automating high-volume manual POS flows.
- Moved automated regression earlier in each sprint so defects were caught before UAT, not after.
- Ran suites in Jenkins; tested REST APIs with Postman and RestAssured.
- Mentored junior testers: reviewed their automation code and onboarded new team members onto the automation suites.

Automation QA Intern | BirchStreet Systems (GDI)

Aug 2021 - Oct 2021

- Automated ERP procurement workflows with Katalon Studio and TestNG; ran UI, API and backend data checks.

SELECTED PROJECTS

ERPNext POS Test Framework - Personal open-source project github.com/sudhansushekhhar/erpnext-playwright-ai-test-automation

- Playwright (JavaScript) framework for ERPNext Retail POS India: 11 end-to-end tests (sign-in and POS sale), 3 page objects, 3 fixture layers and a REST API client that checks each booked invoice by name (status, GST totals, links).
- GitHub Actions spins up ERPNext in Docker, seeds data through the API and checks the site is ready. Pull requests run @smoke on Chromium; nightly runs cover every test on Chromium and WebKit. Full runs publish a report dashboard to GitHub Pages.
- Built guardrails so an AI coding agent writes tests safely: tests come only from approved plain-English test cases traced to PRD requirement IDs, lint rules and an edit hook reject bad patterns, and a mutation check proves each test can fail.

iVendNext POS - Retail (iVend Retail)

- Automated product selection, cart, pricing, GST, discounts, stock deduction and payment flows as module-level and end-to-end regression suites.

NeoGov HR Schedule - Workforce management (TestingXperts client)

- Automated scheduling, shift planning and availability flows in testRigor; tested role-based access across user types.

EDUCATION

B.Tech, Mechanical Engineering | Pune University

Dec 2016

2017 - 2021: Prepared for government competitive examinations (UPSC, SSC) before moving into software testing in 2021.

CERTIFICATIONS

- Katalon Professional Level Certification - Sep 2026
- Katalon AI-skilled Practitioner Certification - Sep 2026
- AI-driven Test Automation Engineer (testRigor) - Sep 2024
